WORKSHOP NEWS & EQUIPMENT SPOTLIGHT

Elevate Your Finishing Game with the DS12 Stationary Disc Sander

In a repair, fabrication or light production shop, finishing quality makes a difference. Burrs, sharp edges, inconsistent surfaces—these cut into your reputation and slow downstream processes. The Kalamazoo DS12 12-inch Heavy Duty Industrial Disc Sander brings rugged performance and precision to your bench, enabling faster, more consistent results across metal, wood, plastics, and small parts.

Why the DS12 Belongs in Your Shop

Power & Reliability

Equipped with a 1 HP TEFC motor, the DS12 delivers dependable, continuous performance for most fabrication-level sanding tasks, while operating on standard 115 V single-phase power (12.8 amps draw).

Heavy-Duty Construction

Built with an all-steel bench design, this sander is rugged and built to last under daily use. The replaceable 12" aluminum disc and 5/8" arbor ensure durability and ease of maintenance.

Precision Work Made Easier

The DS12 includes an 8" × 14" steel tilt table with locking and an angle gauge for precise angled sanding. Optional accessories like the MG12 miter gauge enhance flexibility.

Versatility Across Materials

From deburring raw castings to smoothing wooden prototypes or plastic parts, the DS12 serves multiple roles in a shop. It's equally adept at finishing small workpieces, shaping profiles, or prepping parts for further processing.

KALAMAZOO **INDUSTRIES, INC.**

Proudly Made in USA, Ready for Shipment

With standard parts in stock and typical shipping within 1–2 business days, the DS12 is ready when you need it. A one-year parts warranty backs your investment.

Applications Spotlight: Real-World Use Cases

Application	Advantage	Outcome
Deburring castings & cut parts	Aggressive disc removes flash & burrs cleanly	Reduced downstream finishing time
Small-part finishing	Strong motor + stable platform	Smooth consistency across batches
Profiling / shaping	Tilting table + optional miter gauge	Accurate angles and contour control
Joint prep on weldments	Remove scale or dross prior to welding	Better weld consistency, less rework

Amplify Your Bottom Line

- Time savings — faster metal removal and edge cleanup mean more parts through per shift.
- Quality consistency — fewer rejects, less manual touch-up, more confidence in final output.
- Flexibility — one versatile machine can replace multiple specialized tools.
- Lower total cost — rugged construction, replaceable parts, and domestic availability reduce downtime and repair expense.

Ordering Info

- Call (269) 382-2050 or visit KalamazooInd.com to request a quote or order.
- Warranty & support: 1-year parts warranty, with phone support from Kalamazoo Industries.

A Note From the Engineers

“Our mission with the DS12 was to create a disc sander that stands up to daily shop rigors while offering the control and accuracy needed by fabricators,” says the design team. “We believe that a versatile machine like this becomes indispensable—once it’s in your workflow, you’ll wonder how you ever got along without it.”

About Kalamazoo Industries

With decades of experience in industrial finishing and fabrication equipment, Kalamazoo Industries designs tools that bridge heavy-duty performance and shop-level usability. Our lineup includes belt sanders, combination units, disc machines, and replacement parts—each engineered for durability in real work environments.
