Introducing the K10HS: Precision Meets Performance

The K10HS 10-Inch Industrial High-Speed Non-Ferrous Saw from Kalamazoo Industries is engineered for precision, speed, and durability. Designed for cutting aluminum, brass, copper, and other non-ferrous materials, the K10HS is ideal for industrial applications requiring clean, accurate cuts at high throughput.

Key Features

- High-speed 3 HP motor available in 1-phase (115V or 230V) or 3-phase (230V or 460V) configurations
- Heavy-duty cast iron base and saw arm for industrial durability.
- Accommodates a 10" carbide-tipped blade for non-ferrous metals (blade not included).
- Manual.
- Adjustable material stops for repeatable cuts
- Compact footprint with powerful performance.

Applications

Perfect for machine shops, fabrication facilities, and manufacturing environments where precision and speed are critical. The K10HS excels in cutting aluminum extrusions, copper tubing, and brass stock with minimal burr and maximum efficiency.

Ready to Upgrade Your Cutting Capabilities?

Contact Kalamazoo Industries today to learn more about the K10HS and how it can enhance your production line.
