KM20AS Abrasive Saw Maintenance Checklist

Daily Maintenance

- **Blade Inspection:** Check for wear, damage, and secure mounting.
- **Cleaning:** Remove debris and dust from the saw and surrounding area.
- **Power Check:** Inspect the power cord and connections for wear or damage.
- **Thorough Cleaning:** Clean the entire unit, including hard-to-reach areas.

Monthly Maintenance

- **Component Check:** Inspect and tighten all bolts and fasteners.
- **Safety Guards:** Ensure all safety guards are in place and functioning correctly.
- **Detailed Inspection:** Conduct a detailed inspection of the blade, spindle arbor, and other critical components.
- **Replacement Parts:** Replace any worn or damaged parts with genuine, compatible components.
- **Test Cuts:** Perform test cuts to ensure the saw is operating efficiently.

Annual Maintenance

- **Professional Service:** Schedule a professional inspection and maintenance service.
- **Compliance Check:** Ensure all components are in optimal condition and the saw complies with safety standards.

Record Keeping

- **Maintenance Log:** Keep a detailed log of all maintenance activities, including dates and actions taken.

Regular maintenance will help ensure the KM20AS operates safely and efficiently. If you have any specific concerns or need further assistance, feel free to ask!
